

PROPER INSTALLATION OF A METER PIT

Improper Installations

This image shows where the over tightening of the connection at the bottom of the meter pit has skewed the flanges that will hold the meter – in this case a meter **CANNOT** be set.

Meter pits **CANNOT** be installed on top of a sewer/septic system or its supply lines:

Proper Installation

The **flanges must face each other** – up to the property owner to correct this prior to a meter being set

PROPER INSTALLATION OF A METER PIT
