

FIRE HYDRANT FLUSHING

Oxford, MA

Beginning October 30th 2007 9am – 3pm

Fire hydrant flushing allows us to eliminate or expel sediments and/or other solids that might collect in the water mains. Flushing will improve water quality and fire flows.

There may be some temporary incidents of discolored, brownish tap water. If this occurs please run cold water until it clears.

If you notice brown water while flushing is occurring in your area, delay doing laundry until the water turns clear.

Discolored water poses no threat to your health. However, in the event of discoloration, Aquarion Water Company advises customers to store tap water in the refrigerator for drinking and cooking until the water clears up.

We will be starting at the Auburn town line and working towards the Webster town line for the next several weeks. Signs will be posted in the area flushing is occurring. This schedule is subject to change.

If you have any questions please contact Aquarion's Customer Service Department at 1.800.928.3734, or visit our website at: www.aquarionwater.com.
