*Water Company*

***The Wonders of Water***

The Wonders of Water video was produced to educate students in several different areas of water science. The 27 minute video successfully addresses water usage, conservation, watershed protection, the dangers of toxins to the water supply, the importance of wetlands and watershed protection, and water filtration. The 165-page program guide packaged with the video gives teachers, a history of drinking water as used by the American Water Works Association, dozens of hands on water science lessons, a glossary, and of course a question guide/test to go along with the video. A listing of standards and measures, a guide on how to read a water meter, and a list of resources and organizations for further research are also included.

This **FREE video and program guide** was donated to each middle school in all our service areas during the past few years. If you would like further information on this program or a copy of the video please contact: Kathleen D'Amico, Education and Outreach Coordinator at [kdamico@aquarionwater.com](mailto:kdamico@aquarionwater.com) or call at 1-203-336-7699.
